

Blue Shield Drug Formulary booklet

2011-2012
Quarter 1 2012 update

Introduction to the drug formulary

The 2011-2012 Blue Shield Drug Formulary was developed to serve as a guide for members, physicians, and other healthcare professionals in the selection of cost-effective drug therapy. To ensure that the medications prescribed are covered, and to minimize member out-of-pocket expenses, we recommend that members and physicians consult the Blue Shield Drug Formulary before writing or filling prescriptions.

The Blue Shield Drug Formulary is a list of preferred generic and brand-name medications that have been reviewed for safety, efficacy, and bio-equivalency, are approved by the Food and Drug Administration (FDA), and are eligible for coverage under the Blue Shield outpatient prescription drug benefit.

Blue Shield offers these types of outpatient prescription drug benefits

- A closed formulary plan provides coverage for generic drugs, formulary brand-name drugs, and specialty drugs. Non-formulary drugs and most specialty drugs are covered only when prior authorization is approved.
- An incentive formulary plan provides coverage for generic drugs, formulary brand-name drugs, and specialty drugs. Non-formulary drugs are also covered for a higher copayment. Prior authorization approval may be required to cover some specialty drugs and certain non-formulary drugs. If coverage for a non-formulary drug requiring prior authorization is approved, members are responsible for the non-formulary copayment.
- Some plans underwritten by Blue Shield of California Life & Health Insurance Company do not cover brand-name drugs.

Copayments for generic drugs are always lower than the copayments for formulary brand-name, non-formulary, and specialty drugs. For most plans, if members select a brand-name drug when a generic equivalent is available, they will pay the difference between Blue Shield's cost for the brand-name drug and its equivalent generic alternative, in addition to their generic copayment.

Because there are thousands of medications included in Blue Shield's outpatient prescription drug benefit plan, we list only the most commonly prescribed ones. Please remember that this is not a complete list of medications covered under all plans. The fact that a drug is listed in the formulary does not guarantee that it will be prescribed by a physician. Additional information about specific prescription drug

benefits and drug benefit exclusions can be found in the Blue Shield Summary of Benefits and Evidence of Coverage (EOC) or Certificate of Insurance (COI)/Policy. Blue Shield's customer service can also provide additional information about specific plans. The Blue Shield customer service number is listed on the Blue Shield member ID card.

The formulary is current as of the date listed on the back cover. This formulary is subject to change on a quarterly basis. For the most current information, the formulary can be accessed on our website at **blueshieldca.com** by clicking on the Pharmacy tab, then selecting the *Drug Database & Formulary*.

Note: The Blue Shield Drug Formulary applies to outpatient prescription drug benefits available through plans underwritten by Blue Shield of California and Blue Shield of California Life & Health Insurance Company (individually and/or collectively referred to as Blue Shield throughout this document).

How to read the formulary

Drugs are listed in the drug formulary by therapeutic class, and a Table of Contents and Index of Drugs are provided for quick and easy reference. Additional information should be noted when consulting this formulary:

- Generic drugs begin with lowercase letters.
- Brand-name drugs begin with capital letters.
- The column titled "Tier" identifies the copayment tier where the drug is covered.

Tier number	Tier name	Description
1	Formulary generic	Formulary generic drugs
2	Formulary brand	Formulary brand-name drugs
3	Non-formulary brand	Non-formulary brand-name drugs
4	Specialty or home self-injectable	Covered specialty drugs or self-administered injectables*

* See your Evidence of Coverage or Certificate of Insurance for further details about coverage of specialty or self-administered injectables in your benefit.

- The column titled “Limits/Notes” identifies coverage restrictions or limits for drugs when applicable.

Limits/ Notes	Definition	Description
AL	Age Limit	Coverage restricted by age
GL	Gender Limit	Coverage restricted for gender
PA	Prior Authorization	Prior authorization required to determine coverage
QL	Quantity Limit	Coverage restricted by prescription quantity
ST	Step Therapy	Coverage determined based on use of other first-line therapies/drugs

How is the drug formulary developed?

The formulary is developed, maintained, and updated quarterly by the Blue Shield Pharmacy and Therapeutics (P&T) Committee. Voting members of the P&T Committee are licensed physicians and pharmacists in community practice who are not employees of Blue Shield. The P&T Committee reviews medical literature concerning safety, effectiveness, and current use in therapy to determine whether the drug should be included in our formulary. The medical information reviewed is from a variety of nationally recognized sources such as Medline, other databases, pharmaceutical manufacturers, medical professional associations, and peer-reviewed journals.

What is a brand-name drug?

A brand-name drug is a medication that has been approved by the FDA for sale and marketing in the United States, and that has patent protection that limits which manufacturer(s) can make and sell the medication. Generic versions of brand drugs cannot be made or sold until the patent has expired. Once the patent has expired, generic versions of the medication can be sold alongside the brand version. The Blue Shield Drug Formulary includes many brand-name drugs.

What is a generic drug?

A generic drug has the same active ingredient and dosage form (e.g., tablet or capsule), and works in exactly the same way as its brand-name counterpart. When the patent on a brand-name drug expires, other drug manufacturers can apply to the FDA to make a generic version of the drug. The FDA approves generic drugs when manufacturers have proven that the generic version is equally as safe and effective as the brand-name counterpart. Generic drugs usually cost less than the brand-name equivalent. Therefore, using generic drugs instead of a brand-name drug is one of the easiest ways to reduce your prescription costs. Most Blue Shield health plans provide a lower copayment for generic drugs, compared with brand-name drugs. Most generic drugs are covered even if they are not listed in the drug formulary.

What are specialty drugs?

Specialty drugs are those drugs used to treat complex or chronic conditions, and which usually require close monitoring, such as multiple sclerosis, hepatitis, rheumatoid arthritis, cancer, and other conditions that are difficult to treat with traditional therapies. Specialty drugs may be self-administered in the home by injection (under the skin or into a muscle), by inhalation, by mouth, or on the skin. These drugs may also require special handling, special manufacturing processes, and may have limited prescribing or limited pharmacy availability. Specialty drugs are obtained from a Blue Shield specialty pharmacy, and may require prior authorization for medical necessity by Blue Shield. If coverage is approved, the drug can be obtained only through one of our specialty pharmacies.

What is prior authorization?

Drug prior authorization is a process to obtain advance approval of coverage for a prescription medication. Most medications are covered by Blue Shield without requiring prior authorization. However, some select drugs require a physician to provide information about the patient's prescription to determine coverage. Physicians may provide information for a prior authorization review by calling or faxing a form to Blue Shield Pharmacy Services.

Drugs requiring prior authorization for medical necessity are listed in the formulary with "PA."

What is step therapy?

Step therapy is the practice of beginning drug therapy for a medical condition with drugs considered first-line for safety and cost-effectiveness, then progressing to other drugs that may have more side effects or risks or that are more costly. Step therapy requirements are based on how the FDA recommends that a drug should be used, nationally recognized treatment guidelines, medical studies, information from the drug manufacturer, and the relative cost of treatment for a condition. Other common terms used for step therapy are: "prerequisite therapy," "prior therapy," or "step-therapy protocol." If step-therapy coverage requirements are not met for a prescription and a physician feels that the medication is medically necessary for a patient, a physician may request an exception to the coverage requirements by requesting a prior-authorization review by contacting Blue Shield Pharmacy Services by phone or fax.

Drugs requiring step therapy for medical necessity are listed in the formulary with an "ST."

Participating retail pharmacies

Prescriptions may be filled at any participating (network) pharmacy, unless it is a prescription for a specialty drug. Based on the outpatient prescription drug plan, members may be limited to no more than a 30-day supply of medication from participating retail pharmacies. Blue Shield contracts with a wide network of retail pharmacies. To find a network pharmacy, check the *Pharmacy* section of blueshieldca.com.

Mail-service pharmacy

Blue Shield offers an easy-to-use mail-service prescription drug program through our contracted mail-service pharmacy, PrimeMail.[®] Using the mail-service drug program can save time and money, and is a convenient way to fill maintenance medications for up to a 60-day or 90-day supply, depending on the plan. Maintenance medications are those prescribed to treat chronic conditions (like asthma, diabetes) and taken on a regular basis to maintain health. For more information on using the mail-order prescription benefit, please visit *Mail-Service Prescriptions* in the *Pharmacy* section of blueshieldca.com.
